Part III DETAILED ACTION

Claims 7 and 8 are in this application.

Claims 1-6 have been canceled.

Claim Rejections - 35 USC § 112

1. Claims 7 and 8 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. As to claim 7, it is not clear what structure Applicant is attempting to define in par. (c). As to claim 8, par. (d) does not appear to read correctly. The last three (3) lines of the paragraph does not appear to make sense, i.e., "said first and second access chambers being interconnected in a fluid tight manner through the side wall of the second access chamber".

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains.

Art Unit: 3506

Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

3. Claims 7 and 8 are rejected under 35 U.S.C. § 103 as being unpatentable over Webb (4,932,257) in view of Fuhrmann (U.S. 3,974,862). With respect to claim 7, Webb teaches the structure recited in this claim except for the inner pipe being separate and flexible. Fuhrmann teaches a piping system wherein an inner pipe is flexible. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have made the inner pipe of Webb separate and flexible, in view of the recognition in the art, as evidenced by Fuhrmann, that the use of a flexible inner pipe is desirable because it will facilitate assembly of the system.
